

## NEW: froeling-connect.com online control

Froeling's new online control, froeling-connect.com, allows you to check and control your Froeling boiler with boiler touch display anytime anywhere. You can read and modify the main status information and settings easily and conveniently online. You can also specify who should receive which status messages by text message or email, for example, when the ash box is to be emptied, or even fault messages.

The new froeling-connect.com service allows the owner of the heating system to enable additional users - for example the installer, a neighbour, relative etc. - to access the boiler and monitor the heating system, during holidays for instance, from the comfort of their mobile phone, tablet or computer. froeling-connect requires a Froeling boiler with boiler touch display and (broadband) internet connection. Once the boiler has been connected to the internet and activated, the system can be accessed 24/7 from anywhere using a smartphone or PC with web browser.

The homepage shows the entire heating system and all the main status information (boiler, storage tank, heating circuits, etc.)

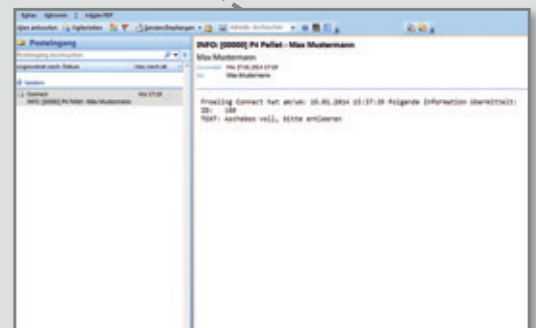

Information is presented in the same clear way as on the boiler console; the temperatures, times, etc. are set intuitively.

Customer  
Installer  
Customer service  
Administrator

The owner of the heating system can set individual logins, for example, for customer services, neighbours, heating engineer, etc.

The administrator specifies which users are to receive emails/texts about status messages and faults.

## Advantages at a glance:

- Online operation and monitoring of the heating system
- Available any time, any place (whether on holiday, business trip, from your sofa, in your garden, at friends', and so on)
- Operates on all platforms
- Individual access rights (e.g. for installers, neighbours, customer services etc.)
- Automatic status messages via text message/email (e.g. empty ash box)

## System requirements:

- Froeling boiler with boiler touch display  
 Software core module from version V 54.04 (build 05.09)  
 Software touch display from version V 60.01 (build 01.20)
- Froeling boiler internet connection via network
- Broadband internet connection
- Web-enabled terminal device (smartphone/tablet PC/laptop/PC) with web browser
